

DESCRIPTION

JetNeat is composed from a spray gun with a quick connector and a venturi with a chemical tank built-in which can be applied at the exit of it. Connected to the water tap by a flexible hose, the trigger gun is able to rinse thanks to a freshwater powerful jet. Once the venturi is quick applied at the outlet of the gun, the Jet Neat can produce a mixing solution that can be sprayed or foamed based on the model and chemical used.

Portable low pressure cleaning system, requires no power or air supply, at up to 45°C. It combines a quick connect spray gun with chemical or disinfectant reservoirs made of durable, chemical resistant plastics. With a large range of metering tips for controlling dilution ratios, it comes in 1.4 lt (0.4 gal) and 2.5 lt (0.7 gal) versions.

Advantages of a JetNeat low pressure-system

- No emission of aerosols in comparison to high pressure-cleaning
- Ensures against a splash back of water and thus any unwanted spread of bacteria

TECHNICAL CHARACTERISTICS

- Function doses 1 chemical with a reach wet foam and rinse
- Working temperature up to 45° C
- Working pressure from 2 to 6 bar
- Easy maintenance
- Venturi system with no pieces in movement
- Works without any power or air supply
- Quick coupler inlet and outlet
